Takeaways:

Common properties

- dotted dividers and containers
- blocks.css-style containers, "stacked cards"
- high-contrast, thick borders. use the background of the page or section of the page to color the buttons in instead of giving them their own background colors

i'm most inspired by the glitch page. i think the messaging/vibes they're going for are very similar to the ones we're going for, and they've kinda nailed it
